

The webinar will be held on the 18th November, 3pm-4pm. For those interested in attending, please email alex.lankester@2degreesnetwork.com

AEA Leads CRC Webinar

Leading energy and climate change consultancy, AEA, will be hosting a Carbon Reduction Commitment (CRC) webinar, which will consider both the technical challenges and the commercial impacts faced by businesses.

In collaboration with environmental networking company 2degrees, the webinar will draw on AEA's experience as the main technical consultant to Defra/DECC in the development of the scheme. It will tackle how businesses and public sector organisations will be affected by CRC and how they can respond. Key questions include whether it's best to act now or wait until the CRC comes in and how the proposed league table could affect business decisions.

Webinar presenter, Daniel Waller, Knowledge Leader for Carbon Management at AEA comments,

“The CRC is a new legally binding emissions trading scheme for the UK, which will affect approximately 5,000 organisations from April 2010. Participants need to begin preparing now yet many are not doing so and will fail to comply. This webinar will address the important issues, and help to better prepare affected organisations to manage the costs and mitigate the risks.”

Joining Waller will be Mark Johnson, Principal Consultant for Energy and Climate Change at AEA, who comments,

“The CRC is a groundbreaking initiative. Not because of its level of environmental ambition, but because of who it is seeking to engage with and regulate - the commercial sector.

“This CRC webinar is the first of its kind, and AEA’s involvement firmly cements our leadership and expertise in carbon reduction.”

The webinar will be held on the 18th November, 3pm-4pm. For those interested in attending, please email alex.lankester@2degreesnetwork.com

NOTES TO EDITOR

AEA are world leaders and trusted advisors in the field of environmental consultancy. AEA are the chief provider of advisory services to the UK Government and work extensively with the EU, the US and China.

For over 30 years, AEA has been assisting Government with evidence-based policy development and helping to solve environmental challenges, with internationally renowned expertise in:

- + Carbon Reduction
- + Sustainability
- + Energy and Climate Change
